THE NATIONAL GRID

The Grid is divided into lettered major squares with figure ticks on the Plan margin are at 100 metre intervals. If lines are drawn connecting similar values on North and South and on East and West margins, small squares are formed. To give a grid reference correct to 10 metres, take letter to indicate major square in which the point lies. Then read the value of West side of the small square on South or North margin. N 130 estimate tens of metres from this. Line to the point on East or West margin and add figure. N 1300. This is the Easting co-ordinate. All Northing co-ordinate is obtained similarly by reading the point on the East or West margin and adding
