THE NATIONAL GRID

The grid is divided into lettered major squares: see diagram. The numbered ticks on the plan margin are at 100 metre intervals. If lines are drawn connecting similar values on North and South and on East and West margins, small squares are formed to give a grid reference correct to 10 metres. Use letter to indicate major square to which the point lies. Then read the value of East side of the small square on South or North margin. If 140, estimate East side of metres from this line to the point and add to previous figure - if 1400 this is the Easting coordinate. ALWAYS GIVE EAST (The North) co-ordinate to obtain similarity by reading value of the South of the point on the East or West margin and adding the estimated tens of metres.
